## Smart Ideas

FrameSpace creates a permanent airspace between the glass and the art. FrameSpace works with the industry standard 1/8" frame/glass allowance. No special sizing necessary.

Art or objects can be made to appear suspended in air by using a second layer of glass over a decorative backing or mirror. FrameSpace makes this technique simple. Our variety of sizes make it easy to accommodate many different materials or objects. Play with perspective and dimension by using varying combinations of FrameSpace.

Matching the background color is easily achieved by adding either a strip of mat paper or strips of matboard behind the clear spacers. The rabbet may also be painted.
